

In 2023, PawPal was created to give dog owners peace of mind when life takes them away from home.

Anders and Julie from Roskilde love traveling with their kids, but their beagle Luna can't always join. They want sitters who feel like family, sending photo and video updates so the children know Luna is happy.

Meanwhile, Emma in Copenhagen Ø works long hours in finance. Her dachshund Max needs care when sudden business trips arise. She values speed, trust, and a smooth digital booking process.

PawPal brings these worlds together. With browse filters, detailed sitter profiles, easy booking forms, and built-in messaging, families and professionals alike can find reliable sitters. Extras like favorites, notifications, and secure payments make the experience seamless.

Whether it's a playful beagle needing long-term care or a dachshund needing last-minute attention, PawPal ensures every dog receives loving care — and every owner feels confident.

PawPal

– Business Background Founded in 2023, connects dog owners with trusted local sitters

Services: overnight stays, daily visits, dog walking

Mission: peace of mind for owners, loving care for dogs

Core App Features Browse Sitters:

List + Filters (dates, location, care type)

Sitter Profile: photos, services, availability, prices, reviews;

Booking: form with dates, service type, dog info;

Messages: chat between owners and sitters;

 **Extras:** favorites, notifications, secure payments;

Persona 1

– Family with Kids (Roskilde) Anders (42), Julie (40), kids (14 & 13), dog Luna (beagle)

Goals: family-friendly sitters, photo/video updates, long stays with confidence.

Pain points: nervous about leaving Luna, active/playful dog needs, price-sensitive.

Persona 2

– Busy Professional (Copenhagen Ø) Emma (28), finance career, dog Max (dachshund).

Goals: quick short-notice bookings, exercise + affection, trust via reviews.

Pain points: sudden trips = stress, distrust of strangers, hates clunky booking flows.

PawPal Project Summary (UI/UX Focus)

Design Approach

Built from scratch with a user-centered process:

research, persona definition, moodboard creation, and iterative prototyping.

Focused on clarity, accessibility, and emotional reassurance in UI design.

Final prototype demonstrates scalable layouts, intuitive navigation, and consistent 8-point grid spacing for a polished mobile experience.
